

ZERUST®/EXCOR® Z-CIS® Methodology

- Do you want to...
- Eliminate corrosion concerns?
 - Achieve rust-free shipment yields of up to 100%?
 - Reduce money lost to corrosion by at least 10%?

We'll show you how with the Z-CIS® System!

The ZERUST® Corrosion Inhibiting System (Z-CIS®) is the proven methodology for deploying the complex corrosion management systems necessary to ensure the protection of metal products shipments as they are handled by multiple (internal and external) stakeholders in transit around the world. ZERUST®/EXCOR® Z-CIS® is proven to meet both the rust-free and contaminant-free requirements of various OEMs sourcing from a global supply base. After implementing a Z-CIS® System, our clients generally realize total cost savings of at least 10% and rust-free shipment yields as high as 100%. Consult a ZERUST®/EXCOR® representative today to solve corrosion issues in your supply chain.

Z-CIS® Five Phase Approach

PHASE 01 IDENTIFYING STAKEHOLDERS

All entities involved in your supply chain (internal and external) affected directly or indirectly by corrosion concerns are identified as stakeholders and contacted by a ZERUST®/EXCOR® representative.

Each entity completes a Z-CIS® Questionnaire either independently or a phone interview, so the ZERUST® Corrosion Engineering Team can properly understand all potential root causes of corrosion at the start of the project.

PHASE 02 PLANNING

The ZERUST® Team reviews the project scope, corrosion control system performance requirements, and critical issues with all stakeholders.

The Z-CIS® Deployment Proposal is distributed. This document outlines the work that the ZERUST® Team would need to perform, the cost associated with the project, our initial recommendations, and any additional items/information required from the stakeholders.

Key stakeholders review and sign off on the Z-CIS® deployment proposal authorizing the ZERUST® team to start work.

PHASE 03 DEPLOYMENT RECOMMENDATIONS

The ZERUST® Team, with customer support, collects product samples from the manufacturing site, draws samples of all processing fluids, and wash chemistry from the production line. ZERUST® evaluates the climatic stress impact of the shipping route, updates process FMEA documents, and reviews process control plans, etc.

Products and fluid samples are tested in one of our regional laboratories located around the world for corrosion management system compatibility.

The results of this study helps determine an effective corrosion protection system (several recommendations may be generated).

PHASE 04 DEPLOYMENT

A review is required with all stakeholders to decide on the corrosion protection system to be deployed.

The ZERUST® Team works with the organizations directly involved in the process change (if any) to deploy the recommended solution. The corrosion protection system is executed in a viable time frame. All results and data are kept confidential and relayed to one customer contact for dissemination.

Trial shipments are made and monitored to ensure that the new Z-CIS® System is working properly.

PHASE 05 CONTINUOUS IMPROVEMENT

Regular audits against the Z-CIS® Deployment Recommendations document are conducted to ensure that the process remains in control and improvements are implemented.

NEW! AxxaWash™ Cleaners & Degreasers

In addition to ZERUST® VCI film, paper, diffusers, rust preventative coatings, and inhibitor products, ZERUST® is now offering an increasing range of cost-effective, high-performance AxxaWash™ metal cleaners and degreasers. These products are formulated to work synergistically together to provide enhanced, comprehensive corrosion solutions for our customers. Backed by our global expert technical support and testing services, a comprehensive corrosion management program can be designed and deployed to meet each individual customer's needs.

- Application-specific products
- Overall cost reduction
- Reduction of corrosion issues associated with handling, packaging, and storage of precision machined, bare metal components
- Enhanced fluid maintenance and control procedures for extending the use life of wash fluids and rust preventative products
- Customer and product-specific operating guides
- ZERUST® assured corrosion-free results from effectively cleaned and dried parts

- Hundreds of products in stock

ZERUST® Safety & Quality

ZERUST® is committed to making safe and effective products that reduce industry's impact on the environment. Our products are approved by many major companies' toxicology, engineering, and packaging departments and comply with health and safety regulations around the globe.

For over 50 years, beginning with the invention of VCI film packaging, ZERUST®/EXCOR® has led the market in quality corrosion solution products. We are dedicated to providing expert corrosion management services and broadening the range of corrosion solutions for our customers. ZERUST® users have access to on-site support from ZERUST®/EXCOR® representatives in more than 70 countries. Our customers have peace of mind when they choose ZERUST® for corrosion control management.

ZERUST® is a product of Northern Technologies International Corporation (NTIC). A majority of ZERUST® products are proudly manufactured in the USA. NTIC's management system conforms to the ISO 9001:2015 Quality Management Standard.

† DECLARATION
Corrosion protection claims are based on Northern Technologies International Corporation (NTIC) internal laboratory testing performed under controlled parameters on contaminate-free substrates. Real-world application corrosion protection duration on different substrates will vary and depends on factors such as, but not limited to, the application or use, environmental / storage conditions, surface cleanliness, type of substrates, and coating thickness (where applicable). The use of the term "Up to" in reference to time is defined as any time duration from zero up to a specified time frame, but in no event beyond the specified time frame. The use of the term "for years" is based on NTIC's experience with its products but is in no way guaranteed. The use of the term "Up to" in reference to volume is defined as any volume from zero up to a specified volume but in no event beyond the specified volume of protection. It is the customer's / user's obligation to evaluate product performance, corrosion protection duration, safety, and suitability for intended use within the scope advised in the data sheet and to comply with all applicable laws and regulations. **LIMITED WARRANTY/DISCLAIMER** Warranty is limited to the replacement of a product that fails to meet specifications.
